Read all instructions prior to connection

Locate the endoscope port* and follow the instructions for attaching the corresponding Endoscope Connector. All connectors must be attached.

If a Connector Assembly needs replacement, locate the port number/name and use the corresponding order number found in the Connector Assembly Identification Chart. Connector Assemblies are specific to individual hookups. Check each Hookup Connection Guide for relevant information.

* This list of corresponding endoscope models is subject to change without notice. For a full list, please go to: www.medivators.com/hookuplookup

Ensure proper alignment of all connectors with the endoscope mating parts prior to attachment.

If you have any questions regarding this hookup, in the U.S., please contact MEDIVATORS Technical Support at 1-800-444-4729. Outside the U.S., please contact your MEDIVATORS Distributor.
The Hookup Connector Block Label contains useful information for quick reference.

**Handle Locking Instructions** - insert block onto basin channel manifold and move handle to the left to lock. Move to the right to unlock.

**Lot Number** - identifies date of manufacture.

**Hookup Part Number** - identifies hookup.

**Hookup Barcode** - barcode of part number.

**Port Name** - identifier of port location in ADVANTAGE system. Error logs identify issues using these names. Also identifier of Connector Assembly replacements for older model hookups.

**Port ID Number** - identifier for Connector Assembly replacements. Not found on older model hookups.

**Alternative Channel Connector Names** - connector names vary depending on specific endoscope channel configuration.

**WARNINGS & CAUTIONS**

This hookup is intended for connection only with the specific endoscope models identified in the appropriate MEDIVATORS online hookup guide. Use of this hookup with endoscopes other than those specified by the hookup application guide may result in inadequate HLD.

Users operating MEDIVATORS AERs and hookups must be trained and competent in the understanding of endoscope channel systems.

Prior to reprocessing, users must verify that the hookup used contains connections for all appropriate channels that require a separate reprocessing connection according to the hookup instructions.

All connectors and adapters must remain firmly attached and unrestricted for the entire disinfection cycle to ensure adequate HLD. Users must inspect the endoscope and hookup combination to verify proper connection and flow.

Modifications or repairs to hookups which do not correspond to the manufacturer’s specifications may result in inadequate HLD and/or damage to endoscopes.

Failure to properly clean and prepare endoscope for immersion prior to hookup connection may result in inadequate HLD and/or damage to the endoscope.

Endoscopes must be inspected for damage and verified to be in proper working order prior to hookup connection. Connection of hookups to damaged endoscopes or endoscopes with obstructed/restricted channels could result in inadequate HLD.

Manual leak testing must be carried out in accordance with manufacturer’s recommendations prior to reprocessing.

Install all necessary waterproof caps, plugs and cleaning adapters prior to immersion.

Do NOT autoclave MEDIVATORS hookups.

MEDIVATORS makes no claim on high-level disinfection efficacy when these reprocessing instructions are not followed, or when this hookup kit is applied to endoscopes other than those specified in the online interactive hookup guide.

Avoid biological contamination. Always wear personal protective equipment when handling endoscopes.
